

Make a new brick creation using TinkerCad[®]!

You'll need:

- A computer
- A free TinkerCad account
- An adult if you don't have an email address
- An object you'd like to build (3D or Vector)
- A flat surface to build on
- Your favorite bricks to build with

Instructions:

1. Find and download a file from Thingiverse or a free vector image website with the image for the brick creation you'd like to make.
2. Create or log into your free TinkerCad account.
3. Use the 'Create new' button to open a new workspace. Don't forget to change the interesting default name at the top to rename your project.
4. In the workspace click the import button at the top right of the screen to insert your image file. If you use a vector image select art instead of the whole artboard to import and increase the width at least to 1 inch.
5. Click on the brick icon in the top right to create to see the brick view and three sizes of brick options.
6. Choose the size you like. (The middle size works great!) Click on layers and began building brick by brick.
7. Enjoy your new creation!
