

Draw a Perfect Circle

You'll need:

- Cardboard
- A piece of paper
- String
- A ruler
- Scissors
- Markers
- A pushpin

Instructions:

1. Decide how wide you want your circle to be, then divide that number in half. This will be our string length.
2. With your ruler, measure a piece of string to that length, leaving extra string on both sides of the measurement. Mark the measurement with a marker.
3. Tie a knot on one mark, and tie the other mark into a loop.
4. Place your piece of paper on top of the cardboard, then place the knot where you want the center of your circle to be. Push a pin through the knot, into the cardboard.
5. Take the tip of your marker and place it in the loop. Pull the string tight and drag the marker around the pushpin in the center. The string will keep the marker attached to the pin, dragging it in an equal distance all the way around. Now you have a perfect circle!
